

# April Star Chart

Map Valid for Winnipeg (50 degrees North)

April 1 11 pm  
April 15 10 pm  
April 30 9 pm  
Central Daylight Time

## Notes:

**Hercules** - Try to spot the star cluster in Hercules. It is a vast cluster of many thousands of stars. However, it is so far away that the light from this object took 25,000 years to get here. Because of this you will need binoculars to see it. Even with binoculars, it will only show up as a faint and very small fuzzy patch in the sky.
