March 15 10 pm  
March 31 9 pm  
Central Daylight Time

## Notes:

**Bootes** - Look for the distinctive "kite shaped" constellation called Bootes in the north east. Bootes was represented as a grape grower or a farmer with a plough (Ursa Major). You can find the bright star Arcturus in this constellation by following the arc of the handle in the big dipper and remembering this phrase: "arc to Arcturus".

**Leo** - In Greek mythology this represents the Nemean Lion that was killed by Hercules in the first of his 12 labours.
